***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group 1, claim(s) 34-50 and 61-65, drawn to methods for cancer diagnosis and methods for detecting telomerase activity.

Group 2, claim(s) 51-60, drawn to a kit comprising a solid phase for binding telomerase and one or more components for assaying for telomerase.

2. The inventions listed as Groups 1-2 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

A 371 case is considered to have unity of invention only when there is a technical relationship among those inventions involving one or more of the same or corresponding technical features. The expression "special technical feature" means those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art. In the instant application, the linking technical feature of a solid phase for binding telomerase wherein the solid phase comprises a reagent for binding target whole cells, such as an affiant that is specific for epithelial cells, does not constitute a contribution over the prior art. For example, the prior art of Hardingham (Molecular Medicine (1995) 1: 789-794) teaches

Art Unit: 1634

immunomagnetic beads labeled with an epithelial specific antibody, which beads are capable of binding and detecting tumor cells (see page 790). Further, Hardingham teaches performing PCR on the epithelial cell/bead aggregates using reagents such as DNA polymerase and dNTPs. It is a property of these components that could be used to assay for telomerase activity. In view of the teachings of Hardingham, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have generated kits comprising a solid phase for binding telomerase wherein the solid phase comprises a reagent for binding epithelial cells and (2) the reagents of DNA polymerase and/or dNTPs (reagents for assaying for telomerase activity) in order to have provided a kit that could be used to detect tumor cells. Thus, there is no special technical feature linking the recited groups, as would be necessary to fulfill the requirement for unity of invention.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
